

ERRATA

In the article, "Patterns of reproductive isolation in three angiosperm genera," by L. C. Moyle, M. S. Olson, and P. Tiffin (*Evolution* 58: 1195–1208), the discussion should be corrected as follows: On page 1205, the authors stated, "In addition, Coyne and Orr (1989, 1997) found no difference between the relative degree of isolation among *Drosophila* species measured with and without interspecific sperm competition (Coyne and Orr 1989), suggesting that, in this animal group at least, male gamete competition does not substantially influence the observed patterns of prezygotic reproductive isolation." However, the cited studies did not ex-

amine male gamete competition in *Drosophila*. The cited references, Coyne and Orr (1989, 1997), showed that the strength of premating, sexual isolation did not vary significantly with the type of mating test used, including whether mating trials were choice (competitive) versus no choice (noncompetitive). As such, these studies have no bearing on whether gamete competition influences patterns of postmating, prezygotic isolation among species, and should not have been cited in this context. This correction does not affect the data or substantive conclusions of the Moyle et al. (2004) paper.

A repeated error occurred throughout the article, "Evolution of color variation in dragon lizards: quantitative tests of the role of crypsis and local adaptation," by D. M. Stuart-Fox, A. Moussalli, G. R. Johnston, and I. P. F. Owens (*Evolution* 58:1549–1559). In the publishing process, a forward

slash (/) was omitted between the terms "crypsis conspicuousness." These two terms should have been separated by a forward slash or the word "or" because they represent two ends of a continuum. We apologize for this omission.
